Investment objective

The Fund’s objective is to provide income and capital growth by investing in fixed income, floating rate, convertible, preferred equity, and common equity securities of corporations anywhere in the world.

Investment Strategies

The Fund’s portfolio manager is Fulcra Asset Management Inc. (“Portfolio Manager” or “Fulcra”). The Fund seeks to provide income and capital growth by primarily investing in fixed income, floating rate, convertible, preferred equity, and common equity securities of corporations primarily

headquartered in North America, with a focus on fixed income securities.

Fulcra is focused on generating absolute returns that do not replicate any particular index or competing funds in the same category.

The Fund may invest up to 15% of its net assets in countries outside North America.

Risks

On December 21, 2018, the Manager decreased the risk rating of the Fund from “low-to-medium” to “low” in accordance with the standardized investment risk classification methodology mandated by the Canadian Securities Administrators. Please refer to the Fund’s most recent simplified prospectus.

Results of Operations

In 2018, the Series A returned -0.6% and the Series F units returned -0.1%.

The Fund avoided large drawdowns that common indices experienced over the period due to its lack of sensitivity to interest rate increases and specific security selection that mitigated overall market risk. At the end of the year, the Fund had 43.8% invested in corporate bonds, 9.9% in cash, 22.5% in convertible bonds, 5.8% in preferred stock, 7.5% in government bonds, 1.6% in common stock, and 8.3% in loans.

The US dollar denominated Bank of America (“BofA”) Merrill Lynch US High Yield Index performed -2.3% year to date, with a duration of 4.4 years at December 31, 2018. The BofA Merrill

Lynch Canada Corporate Index performed 1.0% year to date with a duration of 6.2 years at December 31, 2018. The FTSE TMX Canada Universe Bond Index returned 1.4% year to date, and ended the period with a duration of 7.5 years.

The net assets of the Fund have increased to \$38.3 million at the end of the year from \$24.1 million at the start of the year. The Fund has grown mainly through net subscriptions.

There were no unusual changes to the components of revenue and expenses of the Fund and there were no unusual events or transactions, economic changes or market conditions that affected performance beyond what would be reasonably expected.

The Fund did not borrow money during the year except for immaterial short-term cash overdrafts.

Recent Developments

During the year, protectionist trade rhetoric continued to unsettle markets and volatility intensified. There was still potential for more interest rates rises in both Canada and the U.S., and the Fund aimed to immunize itself from interest rate rises and kept duration low. Fulcra continued to be cautious and continue to search for uncorrelated, event-driven opportunities and high-quality investments at attractive prices.

Purchases made the Fund's portfolio in the year were mostly bonds, including yield-to-call investments, government bonds and high-quality investment grade bonds to serve as a cash proxy. Throughout the period, the Fund participated in numerous unconditional yield-to-call situations with the interest rate risk being very minimal.

At the end of the period, the Fund held 9.9% in cash. Overall duration was 1.7 years at the end of the period, which is a defensive position from an interest rate perspective. The yield-to-maturity of the Fund's portfolio was 8.2%.

There have been no changes to the Manager or Portfolio Manager, or change of control of the Manager, or of the Fund in the year. There have been no actual or planned reorganizations, mergers or similar transactions.

There were no changes to the membership of the Fund's Independent Review Committee ("IRC").

Notes

* The Fund became a reporting issuer on December 30, 2016 and accordingly prior period numbers are not available.

1 The information is derived from the Fund's audited annual financial statements. All per unit figures presented are referenced to net assets determined in accordance to IFRS.

2 Net assets and distributions are based on the actual numbers of units outstanding at the relevant time. The increase (decrease) from operations is based on the weighted average number of units outstanding over the financial period. This table is not intended to be a reconciliation of beginning to ending net assets per unit.

3 Distributions were paid in cash or reinvested in additional units, or both.

4 This information is provided at the end of the period shown.

5 The management expense ratio is based on the total expenses of the period ended and is expressed as an annualized percentage of daily average net asset values during the period.

6 The Fund's portfolio turnover rate indicates how actively the Fund's portfolio manager manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a fund's portfolio turnover rate in a period, the greater the trading costs payable by the fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a fund. The portfolio turnover rate is calculated based on the lesser of purchases or sales of securities divided by the weighted average market value of portfolio securities, excluding short term securities.

7 The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period.
